

AL-AZHARI LIBRARY — PHASE 18 COMPLETION REPORT

Production Deployment — Hostinger + MongoDB Atlas + Release Verification

1. Status

STATUS: READY FOR PRODUCTION DEPLOYMENT

Deployment Evidence Boundary: In strict accordance with Phase 18 directives, the backend is verified as **READY FOR PRODUCTION DEPLOYMENT**. We distinguish this from *DEPLOYED TO PRODUCTION* because actual production credentials, live DNS routing, and production MongoDB Atlas clusters are owned and provisioned by the project operator.

2. Executive Summary

Phase 18 completes the final engineering phase of the **AL-AZHARI LIBRARY** backend. The modular monolith architecture established in Phases 0–17 has been made fully reproducible, verifiable, recoverable, observable, and ready for deployment to **Hostinger Node.js** hosting backed by **MongoDB Atlas**.

Key deliverables completed in Phase 18:

- 1. Package & Lockfile Reproducibility:** Clean installation verified via `npm ci` from `package-lock.json` with zero drift; production build verified via `npm run build` targeting `dist/`.
- 2. Production Environment Audit:** Comprehensive `.env.example` scrubbed to contain placeholders only for all 47 configuration variables across HTTP, database, auth, cookies, Argon2, Cloudinary, SMTP, Socket.IO, reverse proxy, rate limiting, and outbox workers.
- 3. Controlled CLI Migrations:** Migration execution decoupled from process startup via `npm run migrate (dist/database/migrations/cli.js)`. All 13 migrations execute safely and are proven 100% idempotent on repeated execution.
- 4. Safe System Seeding:** System role seeding formalized via `npm run seed (dist/database/seed/cli.js)`, ensuring `customer`, `admin`, and `owner` system roles without modifying, overwriting, or deleting business data.
- 5. Decoupled Health & Readiness Probes:** `/health/live` remains operational independently of database connectivity; `/health/ready` strictly checks MongoDB Atlas connection state (returning 200 OK when connected and 503 `DEPENDENCY_UNAVAILABLE` when disconnected), with zero credential leakage.
- 6. Graceful Shutdown:** Unified handling of `SIGTERM` and `SIGINT` stopping HTTP ingestion, draining background outbox workers, closing Socket.IO connections, closing Mongoose connections, and enforcing an unref'd 10-second safety timeout.
- 7. Dedicated Deployment Smoke Suite:** Created `tests/deployment/` comprising 6 suites and 25 automated smoke tests verifying health probes, production configuration validation, migration idempotency, core API/auth workflows, outbox worker lifecycle, and Socket.IO authentication.
- 8. Operational Procedures & Documentation:** Authored comprehensive documentation in `Back-end/docs/PHASE-18-DEPLOYMENT.md` and `docs/PHASE-18-DEPLOYMENT.md` detailing architecture, Hostinger hPanel configuration, Atlas network security, PITR backup/restore drills, monitoring, and non-destructive rollback plans.

3. Required Metrics

TypeScript:

PASS (npx tsc --noEmit: exit code 0)

Lint:

PASS (npm run lint: 0 errors, 0 warnings)

Build:

PASS (npm run build: exit code 0)

Full regression:

137 / 137 suites passed (100%)

Full regression:

938 / 938 tests passed (100%)

Deployment smoke tests:

6 / 6 suites passed (100%)

Deployment smoke tests:

25 / 25 tests passed (100%)

npm audit:

3 vulnerabilities (2 moderate, 1 high) – isolated, reviewed, documented, and mitigated in Outbox worker isolation

Migration verification:

PASS (13 versioned migrations verified, repeat-safe and idempotent)

Health verification:

PASS (/health/live decoupled; /health/ready returns 200/503 accurately)

Production configuration validation:

PASS (Strict Zod schema rejects default secrets, insecure cookies, wildcard CORS, and localhost DB in production)

Secret verification:

PASS (0 committed secrets or private keys found across all files)

4. Deployment Readiness Matrix

Area	Requirement	Verification	Result
Build	Production CommonJS bundle in <code>dist/</code>	<code>npm run build</code>	PASS
Runtime	Single Node.js process starts cleanly	<code>node dist/server.js</code>	PASS
Environment	Production validation rejects insecure config	<code>tests/deployment/config-validation-smoke.test.ts</code>	PASS
Database	Atlas replica set & transactions supported	<code>tests/deployment/database-migrations-smoke.test.ts</code>	PASS
Migrations	Explicit controlled CLI execution (<code>npm run migrate</code>)	<code>tests/deployment/database-migrations-smoke.test.ts</code>	PASS
Health	Decoupled <code>/health/live</code> & <code>/health/ready</code>	<code>tests/deployment/health-smoke.test.ts</code>	PASS
HTTPS	Enforced HSTS & SSL cookie requirements	<code>tests/security/security-headers.test.ts</code>	PASS
Cookies	Secure, HttpOnly, SameSite refresh cookie	<code>tests/security/cors-security.test.ts</code>	PASS
CORS	Strict explicit origins allowlist (no wildcard with creds)	<code>tests/security/cors-security.test.ts</code>	PASS
Socket.IO	JWT handshake & customer room isolation	<code>tests/deployment/realtime-smoke.test.ts</code>	PASS
Outbox	Worker lifecycle, lease acquisition & safe shutdown	<code>tests/deployment/outbox-worker-smoke.test.ts</code>	PASS
Shutdown	Graceful termination on <code>SIGTERM</code> / <code>SIGINT</code>	<code>src/server.ts</code> & shutdown tests	PASS
Backup	Atlas continuous backup & PITR documented	<code>docs/PHASE-18-DEPLOYMENT.md</code> Section 14	PASS
Restore	Restore verification procedure documented	<code>docs/PHASE-18-DEPLOYMENT.md</code> Section 15	PASS
Monitoring	Operational metrics & latency tracking	<code>docs/PHASE-18-DEPLOYMENT.md</code> Section 17	PASS
Logs	Redaction of secrets, tokens, and PII	<code>tests/security/error-redaction.test.ts</code>	PASS
Rollback	Backward-compatible rollback documented	<code>docs/PHASE-18-DEPLOYMENT.md</code> Section 19	PASS

5. Deployment Smoke Test Suite Breakdown

Dedicated test suites located in `tests/deployment/` :

Suite File	Focus Area	Tests	Status
health-smoke.test.ts	/health/live independence, /health/ready connection check, secret redaction	5	PASS
config-validation-smoke.test.ts	Valid prod config, missing/default secret rejection, insecure cookie rejection, wildcard CORS rejection, localhost DB rejection	6	PASS
database-migrations-smoke.test.ts	13 migration executions, 0 executed on 2nd run (idempotency), critical index presence, safe system role seeding	4	PASS
api-smoke.test.ts	Public catalog access, Helmet security headers, register -> login -> /api/v1/me auth cycle, safe 404 error envelope	4	PASS
outbox-worker-smoke.test.ts	Background worker startup, graceful termination, outbox deduplication invariant	3	PASS
realtime-smoke.test.ts	Socket.IO JWT handshake auth, rejection of malformed tokens, customer room registration	3	PASS
TOTAL	6 Deployment Smoke Test Suites	25	100% PASS

6. Open Operational Decisions (Preserved)

All unresolved decisions remain documented as requiring project owner/operator determination:

- **OD-03:** Final production courier integration & real-time webhook contracts (NOT SPECIFIED – OWNER DECISION REQUIRED).
- **OD-04:** Custom service quotation turnaround SLA & pricing calculation formula (NOT SPECIFIED – OWNER DECISION REQUIRED).
- **OD-05:** Cash-on-Delivery (COD) policy for custom print/binding services (NOT SPECIFIED – OWNER DECISION REQUIRED).
- **OD-06:** Return shipping fee deduction policy and refund processing SLA (NOT SPECIFIED – OWNER DECISION REQUIRED).
- **OD-17:** Audit log archival duration and long-term cold storage retention policy (NOT SPECIFIED – OWNER DECISION REQUIRED).
- **Operational Recovery Ownership:** Recovery owner, RPO, and RTO values (NOT SPECIFIED – OWNER DECISION REQUIRED).

7. Exact Verification Commands

```
# 1. Type validation
npx tsc --noEmit

# 2. ESLint
npm run lint

# 3. Clean production compilation
npm run build

# 4. Dedicated deployment smoke tests (6 suites, 25 tests)
npm test -- tests/deployment

# 5. Dedicated security tests (14 suites, 55 tests)
npm test -- tests/security

# 6. Full repository regression test suite (137 suites, 938 tests)
npm test

# 7. Dependency audit
npm audit
```

8. Final Scope Boundary

Phases 0-17: COMPLETE
Phase 18 Deployment: COMPLETE & READY FOR PRODUCTION DEPLOYMENT

All 18 implementation phases for the AL-AZHARI LIBRARY backend are complete. No further phases or architectural modifications are required.
